Date: May 10th, 2016

Dear Website Visitors:

My name is Lucas Fisher, I am a web designer from the Web Application Development lab from the Center for Advanced Research and Technology (CART). In the past year I have completed multiple group projects as a pillar of the group. I love math and technology, two things that go hand in hand, and the same type of work achieved in class is also a personal hobby.

In the future, I hope to attend either a 4-year college or start a local business. With either path I'd like a source of income working with technology. I have enrolled in the Business and Finance ROP class at CART for the 2016-2017 school year, which will be beneficial to me despite what path I ultimately choose to pursue.

Recently I have been assigned the creation of the management portion of the RAD Project website, which doubles as my presentation for the CART 2016 spring showcase. In its creation, I have gained experience in implementing multiple database tables. I have also worked with multiple groups and adapted my content for multiple website implementations with different structures.

The section of the RAD Project that is most reflective of my skills is the employee planner. It provides a space for employees to plan events month by month and allows administrators to also schedule events for their employees and view their events. It serves an important purpose in the scheduling for RAD volunteers and employees, and provides a simple, elegant method of organization.

I've learned a lot in this year of Web Application Development, and am ready to design websites for real-life applications. Please forward any questions or inquiries to lucasfisherca@gmail.com, thank you for your time.

Sincerely,
Lucas Fisher
